

**Raise Safety Awareness, Unite Various Forces**

**to Develop a Civilized Internet for the Next Generation**

**Shengkai Wang, CNNIC**

## **Definition of Internet Governance:**

The collective rules, procedures and related programs that affect practices and interactions concerning internet infrastructure, transaction and contents.

The purpose and goal of our today's workshop is consistent with the definition of internet governance.

# parties

Governmental	}	Policy, long-term plan and administration
National		e.g. 2015 China Cybersecurity Week's theme, opened on June 1
International	}	Bilateral, multilateral and global dialogue, cooperation and coordination mechanism. Internet is international, its governance should also be international.
Regional		
Social	}	Civil efforts & various forces, companies, institutions, public organizations, individuals
Industrial		governance ≠ government, it needs broad participation of multi-stakeholders

# measures

Legal	———	“Hard”/Compulsory measures and punishment
Moral	———	“Soft”/Ethics and self-conscious awareness, self-discipline, self-management
Organizational	———	formation of a global consortium/council
Technical	———	Hardware or software tools and equipment, supporting measures
Theoretical	———	Study of assessing models and methods to evaluate sth. is good or bad, e.g. British IWF and its 3R (Rating、Reporting & Responsibility ) model is a good example
Informational	———	Info exchanging and sharing platform, creating multi-media database
Educational	———	School and family's corresponding education
Cultural	———	Form good and healthy custom and atmosphere in the whole society

As activities guided by the government, many ministries, Internet societies and companies had taken part in it.

One main emphasis of the Week activities is about the safety and protection of online adolescent.

Cultural	———	Form good and healthy custom and atmosphere in the whole society

During the inauguration of new-built Global Internet Governance Alliance -- a new multilateral forum on Internet governance, the co-chair Jack Ma said, the young is the future and hope of Internet, we'd do more for their healthy growth, and give them more opportunities and benefits by the means of Internet.

# parties

Cultural	———	Form good and healthy custom and atmosphere in the whole society

During ICANN46 in 2013 in Beijing, collaborated with several Internet communities, companies and civil organizations such as HongKong Children Rights Protection Organization, DotAsia, CNNIC and so on, we had successfully held the 1st Youth and Children's Forum on Internet Governance.

Mr. Imran from Pakistan suggested the following names in the email to me yesterday:

(1) Global Consortium for the Development of Civilized Internet for Kids, Teenagers, Youngsters.

(2) Global Council for Secure, Reliable and Civilized Internet (for the Next Generation), it was the main theme of our this year workshop as well.

(3) Council for the Civilized Internet

## Considering differences:

- (1) **Country and nationality:** e.g. some minorities have very different standards from others
- (2) **Political system:** for attracting more engagement of different stakeholders, we'd consider the realistic existence in this “wonderful” world.
- (3) **Religion belief:** It's really a serious point, we'd consider it seriously.
- (4) **Culture background:** e.g. Chinese culture is very different from the western.
- (5) **Public order and custom:** It involves a broad scope and it's related to religion, culture, education background and so on.
- (6) **Time and age:** with the development of time, a picture that used to seem “terrible” maybe becomes “normal” or not so “sensitive”. On the other hand, we'd broadly, actively and carefully listen to the voices from the next generation, they have many different, fresh and creative opinions.

## Goals of our workshop and efforts:

- (1) To form a Global Consortium/council or working group on the big platform of IGF or APrIGF or new-built IGA recently with participants coming from various stakeholders
- (2) To establish a mechanism for regular/irregular exchange activities/workshops, e.g. for regularly/irregularly proposing policy recommendations, proposals, initiatives or publishing whitepapers and so on
- (3) To develop some general assessment criteria/standards for judging what is good or what is bad which are applicable to different countries or regions.
- (4) To establish a platform/database for info sharing and exchanging
- (5) To establish a bilateral/ multilateral response mechanism for joint actions
- (6) To create a secure, reliable and civilized Internet for the healthy growth and development of next generation – our ultimate purpose and goal !

**Thanks!**
